

WhisperInvite Guide

v1.3.0 — by Mhortai

What it does

WhisperInvite does two things. **Whisper-invite**: when someone whispers you *exactly* the keyword (default: `inv`), they are automatically invited to your group — the keyword inside a longer sentence never triggers an invite. By default only players on your **greenlight list** can trigger this; strangers are silently ignored (`/wi scope everyone` opens it up for pug hosting). **Auto-accept**: when a player you have greenlighted invites you, the invite is accepted automatically — even while you are AFK — and the invite popup is cleared.

Client: WotLK 3.3.5a (Interface 30300).

Installation

Copy the **WhisperInvite** folder into **Interface\AddOns** and restart the client (or `/reload` if it was already installed).

The minimap button

A round button sits on your minimap edge. The icon is **green** while whisper-invite is listening and **red** while it is off.

- **Left-click** — toggle whisper-invite on/off.
- **Right-click** — open the options panel.
- **Shift + left-click and drag** — move the button anywhere around or on the minimap; it stays exactly where you drop it, with any minimap addon, shape, or scale. Moving the button never toggles the addon.

Options panel

Open it via right-click on the minimap button, `/wi options`, or Interface → AddOns → WhisperInvite. It contains:

- **Enable whisper-invite** — the master switch for keyword invites.
- **Whisper a confirmation back** — whether the invited player receives “You have been automatically invited.”
- **Keyword** — type a new keyword and press Enter. The whisper must be exactly this word; matching is case-insensitive and surrounding spaces are ignored.
- **Only greenlighted players can trigger the keyword** — checked (default): whispers from players not on your greenlight list are silently ignored. Uncheck to let anyone trigger the keyword (open/pug mode).
- **Auto-accept invites from greenlighted players** — master switch for auto-accept.
- **Player + Greenlight button** — add a name to the greenlight list.
- **Remove selected** — click a name in the list, then this button, to remove it.

Slash commands

Command	Effect
<code>/wi</code> or <code>/wi toggle</code>	Toggle whisper-invite
<code>/wi on</code> <code>/wi off</code>	Set whisper-invite explicitly

/wi keyword	Set the invite keyword
/wi scope greenlist everyone	Who may trigger the keyword (default: greenlist)
/wi allow	Greenlight a player (auto-accept their invites)
/wi disallow	Remove a player from the greenlight list
/wi list	Print the greenlight list
/wi accept	Toggle auto-accept
/wi reply	Toggle the confirmation whisper
/wi status	Print a one-line status summary
/wi options	Open the options panel

/whisperinvite works everywhere /wi does. Unknown input prints help.

Behaviour notes

- Keyword matching is always exact: case-insensitive, spaces trimmed, the whisper must be the keyword and nothing else. “inv please” and “my inventory is full” never trigger an invite.
- The greenlight list serves both features: in the default greenlist scope it controls who may trigger the invite keyword, and it always controls whose invites are auto-accepted.
- If you are in a group but not the leader (or raid assist), the addon tells you locally and does not attempt the invite. If the group is full, the whisperer is told so (when the confirmation whisper is on).
- Auto-accept fires on the invite event itself, so it works while AFK. It cannot work while you are at a loading screen or logged out.
- Greenlight names are stored per account (SavedVariables WhisperInviteDB), matched case-insensitively, and realm suffixes are stripped. New versions merge missing defaults into an existing database automatically.

Changelog

v1.3.0 — 2026-09-08

- Keyword matching is now ALWAYS exact — the whisper must be exactly the keyword (case-insensitive, spaces trimmed). The accident-prone “contains” mode (keyword anywhere inside the whisper) is removed entirely; /wi mode is gone, and saved settings with contains mode simply behave as exact.
- Options panel reordered: the Keyword field sits directly under the whisper-invite checkboxes with a one-line exact-match hint, the greenlist-scope checkbox follows it, and the former “Exact match only” checkbox is removed with the mode.

v1.2.1 — 2026-09-08

- Options panel: the “Exact match only” label no longer runs past the panel edge; its explanation moved to its own grey line beneath the checkbox.

v1.2.0 — 2026-09-07

- Invite scope added (/wi scope greenlist|everyone, also in the options panel). Default is GREENLIST: only greenlighted players are invited when they whisper the keyword; everyone else is silently ignored. “Everyone” restores the open behaviour for pugs. Minimap tooltip and /wi status show the active scope.
- This closes the “anyone whispering inv gets invited” hazard: the default keyword is extremely common and the enabled state persists across sessions, so an open listener could fire on strangers.

v1.1.3 — 2026-09-07

- The gold ring now actually circles the icon: canonical Blizzard/LibDBIcon layout, icon corners trimmed so they don't stick out of the round border, standard hover highlight added.

v1.1.2 — 2026-09-07

- Minimap button placement is free-form: Shift+drag drops the button at the exact release spot (x/y from minimap center) instead of snapping to a computed circle — works with minimap addons that scale rather than resize the map. Loosely clamped so it cannot be dragged off-screen. Old stored angle migrates once automatically.

v1.1.1 — 2026-09-06

- Minimap button no longer lands inside the circle on scaled/resized minimaps: the anchor radius is computed from the minimap's actual size and re-anchors on `PLAYER_ENTERING_WORLD`.

v1.1 — 2026-09-06

- Case-insensitive plain-text keyword matching with exact (default) and contains modes, immune to Lua pattern characters.
- Shift-drag no longer toggles the addon; saved-variable defaults merge recursively; drag `OnUpdate` only runs while dragging; `/wi on` and `/wi off` are real commands; helpers are file-locals; tooltip refreshes live; invite attempts guarded when you lack invite rights or the group is full (with local feedback and a “group is full” whisper when auto-reply is on).
- Options panel added (Interface → AddOns, right-click minimap button, or `/wi options`): all toggles, keyword editbox, scrollable greenlight-list editor.
- Auto-accept from greenlighted players added, with `/wi allow`, `disallow`, `list`, `accept`. New slash commands incl. `reply`, `status`, `options` and the `/whisperinvite` alias. First `MANUAL.md` and `CHANGELOG.md`.

v1.0

- Initial version: keyword whisper-invite (substring match), movable minimap button, `/wi slash` command.
