

WhisperInvite in a nutshell

v1.3.0 — by Mhortai

Whisper me **inv**, get invited. Greenlight a friend, and their invites are accepted for you automatically — even while you're AFK.

Keyword invite Someone whispers you exactly the keyword (default <code>inv</code>) → they're in your group. A keyword buried in a sentence never fires.	Private by default Only greenlighted players can trigger the keyword; strangers are silently ignored. Hosting a pug? <code>/wi scope everyone</code> .
Auto-accept Invites from greenlighted players are accepted for you automatically, popup cleared — works while AFK.	The minimap button Green = listening, red = off. Left-click toggles, right-click opens options, Shift+drag parks it anywhere on the minimap.
Greenlight list One list powers both features. Add or remove in the options panel, or <code>/wi allow <name></code> / <code>/wi disallow <name></code> .	Handy commands <code>/wi toggle</code> · <code>/wi keyword <word></code> · <code>/wi status</code> · <code>/wi options</code>
